## **FOR IMMEDIATE RELEASE**

### **Polarion ALM Team is Runner-up for Eclipse Community's "Best Commercial Developer Tool"**

**EclipseCon 2008, Santa Clara, California, March 17, 2008** — Polarion Software Inc., creators of fully integrated application lifecycle management solutions and Subversion services, today announced that the company's application lifecycle management solution "Polarion ALM *Team 3.0*" has been named as runner-up for the Eclipse Community Award for *Best Eclipse-based Developer Tool*.

"I wish to thank the Eclipse Community for this recognition of our efforts in providing the market with a comprehensive ALM solution that is easy to set up and use day to day, and that will scale all the way up to the enterprise level," said Polarion CEO Michael Carey. "We see the future of commercial software development being firmly rooted in open source solutions like Eclipse, to the extent that we have deeply committed to open source as the basis for commercial application lifecycle management solutions. We deeply appreciate this level of recognition from the Eclipse Community."

"I am seriously committed to supporting companies such as Polarion providing quality solution for the Eclipse community," said Ralph Mueller, Director, Ecosystem – Europe for the Eclipse Foundation. "In the case of Polarion it gives me great pleasure that they have been recognized as a finalist for Best Commercial Developer Product, as they have created a strong solution between XP, SCRUM, Agile Computing and the dynamic business challenges of: requirements change, customers change their minds, business conditions vary, and QA goes up and down with each."

Polarion ALM *Team* is Polarion's integrated ALM platform solution covering development-related phases of ALM such as bug tracking and version control. Other products in the Polarion family cover all major ALM aspects from requirements inception through coding and deployment. All Polarion ALM products leverage Subversion, the open source version control system that, according to industry analyst Forrester Research, is the current market leader in the SCCM space. Subversion is used to store and track *all* development artifacts, and to deliver
